

GLOBAL VILLAGE

TelePort™ 56K/V.92

Model 6250

Enhanced Performance Modem for any Macintosh with a Serial Port

The GLOBAL VILLAGE TelePort 56K/V.92 Model 6250 is a controller-based, external dialup modem that maximizes the performance of any serial port-equipped Macintosh computer. The Model 6250 conforms to the newly adopted ITU V.92 and companion V.44 standards. The GLOBAL VILLAGE TelePort 56K/V.92 means:

- ◆ **Faster Web Browsing** with V.44 Compression
- ◆ **Faster Web Downloads** for email, music, video and more
- ◆ **Faster Internet Connections** with V.92 QuickConnect
- ◆ **Phone Calls While Online** with V.92 Model-on-Hold

The GLOBAL VILLAGE TelePort 56K/V.92 Model 6250 is also compatible with the V.90 standard for maximum usability with both present and future 56K online services*. PLUS, unlike many modems being sold today, the Model 6250 incorporates an on-board controller and DSP (Digital Signal Processor). That means there's no performance compromise since the Model 6250 does not rely on your computer's CPU to perform the complex, multiple, real-time computing tasks required for high-speed communications. As a bonus, the Model 6250 is bundled with Global Village's **#1 selling, award-winning GlobalFax™ software**.

TECHNICAL SPECIFICATIONS

DATA MODEM TRANSMISSION SPEEDS	56,000 bps receive/48,000bps send, 33,600 (V.34 annex 12), 28,800, 14,400, 9600, 4800, 2400, 1200 and 300 bps
COMMUNICATIONS MODE	Asynchronous
ERROR CORRECTION	V.42 (LAP-M) MNP2-4
DATA COMPRESSION	V.44, V.42bis, MNP5
FAX SPEEDS	14,400, 12,000, 9600, 7200, 4800 & 1400 bps
