What to do... Upgrading with PowerPC Logic Board

Introduction:

This document provides information about what to do if you're upgrading your PowerBook 5xx or Duo with a PowerPC logic board.

The use of your PowerPort Mercury 5xx or Duo modem with your PowerPC upgrade requires the latest release of GlobalFax for PowerPort Mercury software, version 2.5.5. GlobalFax 2.5.5 accommodates the many changes in the computers hardware and system software that a PowerPC upgrade implements.

Users of GlobalFax 2.5

If you currently have GlobalFax for PowerPort Mercury 2.5, then you can download the GlobalFax 2.5.5 updater that will enable the Mercury modem to function with your PowerPC upgrade. The PP5xx/Duo 2.5.5 Updater is available on our website at: <http://www.globalvillage.com/support/swlocator/>
