## How to... Use your PC Card on PowerBook 2400/3400/G3

### **Introduction:**

This document provides information about how to use your Global Village PC Card on a PowerBook 2400, 3400, or G3.

3400, 2400, and G3 PowerBooks, stating that “Card and Socket Services 3.0 are not present,” require a GlobalFax update. Updating your current version of GlobalFax software to the 3.0.2 Universal Updater will allow it to work on 3400, 2400, and G3 PowerBooks.

The 3.0.2 Universal Updater is available on our website at:  
<http://www.globalvillage.com/support/swlocator/>

**NOTE:** Newer PowerBook G3 computers (identifiable by a white Apple logo on the cover and a Function key in the lower left of the keyboard) will not work with Global Village modem/ethernet (combo) cards. Inserting a combo card into a new G3 PowerBook will cause the PowerBook to freeze within two minutes. At this time, there is no solution or workaround, though Apple and Global Village are currently looking into this issue. Global Village modem-only PC Cards work fine with these PowerBooks.
