## How to... Use Your TelePort and PowerPort Modem on the Same PowerBook

### **Introduction:**

This document provides information about how to use your TelePort and PowerPort Modem on the same PowerBook.

NOTE: This procedure is not recommended for the TelePort Gold II.

In order to use both your TelePort and PowerPort modem on the same PowerBook, the GlobalFax for PowerPort software should be the only software installed. Your PowerPort modem can be then used for faxing or data (online) connections if you're "on the road" and don't want to use your TelePort. In contrast, when not traveling, you can use your TelePort modem for faster data connections, which does not require any Global Village software to be installed.

When using either modem, you need to verify that in your PowerBook or PowerBook Setup control panel, you have configured the PowerBook for the appropriate internal or external port. Please contact Apple for further assistance with your PowerBook and won't be affected by your PowerPort software.
