About... GlobalFax Controls Control Panel Reports "iMac" using a G3

Introduction:

This document provides information about why the GlobalFax Controls control panel reports "iMac" using a G3.

If you are using GlobalFax 2.6.5 with a PowerBook G3 or new (blue and white) G3 and your GlobalFax Controls control panel says "iMac" it is because Apple bundled some G3 computers with the same internal modem that is bundled with the Apple iMac. Because GlobalFax 2.6.5 is also supported on an iMac, it will identify the internal modem on your G3 as an "iMac" modem, but will not affect the performance of GlobalFax 2.6.5 or your internal modem.
